C.R. Kennedy Offices - BALCATTA

Nationally Recognised in Australia and  
New Zealand  
Nationally Accredited in the UK

Gaining a nationally recognised accreditation specialised in GPR and utility locating will provide employers, organisations and potential customers with the evidence and trust that you are qualified at a very high standard and that you are committed to quality and improvement, making you stand out from your competition.

The workshop is run over two days and our objective is to provide quality outcomes to participants.

Our training is designed to provide interactive, practical, hands-on GPR training for locators who want to integrate GPR imaging into their locating.

This course aims to improve the understanding of the physical principles involved in GPR use and their practical application in the field. We focus on the practical use and interpretation of GPR results, enabling participants to improve field practices and implement GPR locating techniques in combination with EM locating.
